FSG ENERGY MANAGEMENT (EMS) · SHOW FLOW

Chariot, Live

A walk through the screens your team will use every day — and what each one is worth.

BOBBY GRAHAM · CGO, FSG

WHY

The Problem Is Silent

A cooler drifts past 41°F overnight. A thermostat walks from 74 to 68. A closed store runs a full occupied day. Nobody sees it until the bill or the spoilage.

WHAT YOU CAN'T SEE, YOU PAY FOR

WHAT

One Screen, Five Jobs

SEE

Every site, live

Sites on a map, online status, space temp, setpoints, equipment status, humidity — updating as they change.

CONTROL

Setpoints, modes, schedules

Changes go to the equipment right away. Who can change what is yours to decide.

PROVE

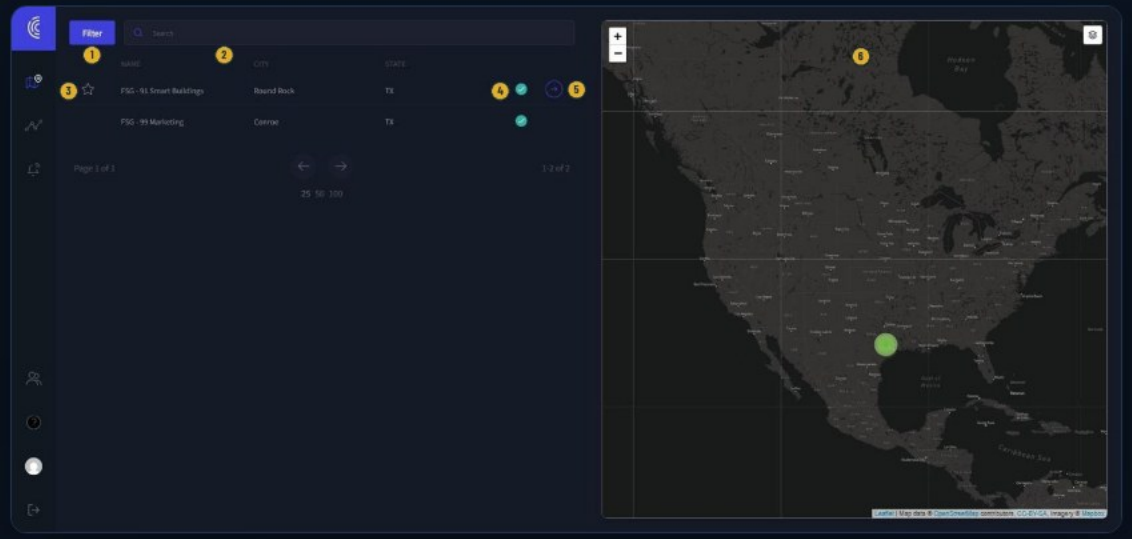

Trends on any point

Hours, days or weeks. Confirm a repair, settle a comfort complaint, compare units.

ACT

Rules that alert — and a center that fixes

Email or phone when something needs attention; FSG Support watching the same screen 24/7.

Sites page — list on the left, map on the right. Green check = connected and reporting.

HOW · 01 · SITES

Every Site on One Map

After sign-in, Chariot opens on the whole portfolio. Search by site name, number or city. Filter by City, State, Site Group, Favorite or Site Status.

- **Online status at a glance**
  If it's not green, FSG Support already knows.
- **Favorites float to the top**
  Each person sees the sites they own first.
- **25 / 50 / 100 per page**
  Built for hundreds of sites, not one.

A site in the Zones view — one thermostat card per HVAC unit, notification panel on the right.

HOW · 02 · THE SITE PAGE

Read a Store in Ten Seconds

Each card is one unit: big number is space temperature, flame is the heating setpoint, snowflake is cooling, the word underneath is what the unit is doing right now.

- **Local conditions in the header**
  Site time, outdoor temperature, weather, humidity.
- **Mini-trend on every card**
  Recent space temperature without leaving the page.
- **Recent alerts, right there**
  The notification panel stays put as you switch views.

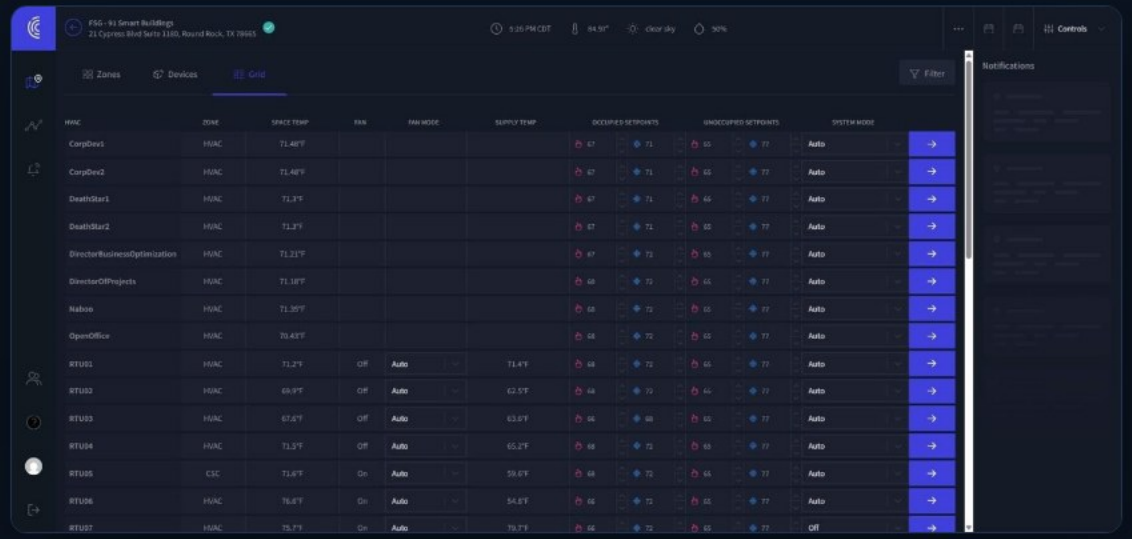

Devices view — HVAC on the left; lighting controls, door readers and coolers on the right.

HOW · 03 · DEVICES

Not Just HVAC

Lighting zones with their override state, door readers with last-access, coolers and meters — each with current values, on the same site page.

- **Lighting override, visible**
  Somebody flipped the switch? It shows.
- **Doors, coolers, meters**
  Any device that speaks a BAS protocol lands here.
- **One login, every system**
  No second portal for refrigeration or access.

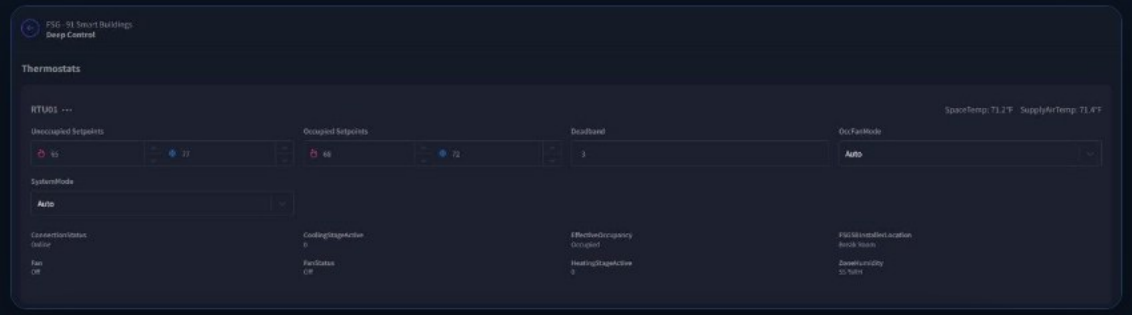

Grid view — every HVAC unit at the site in one table; lighting zones further down.

HOW · 04 · GRID

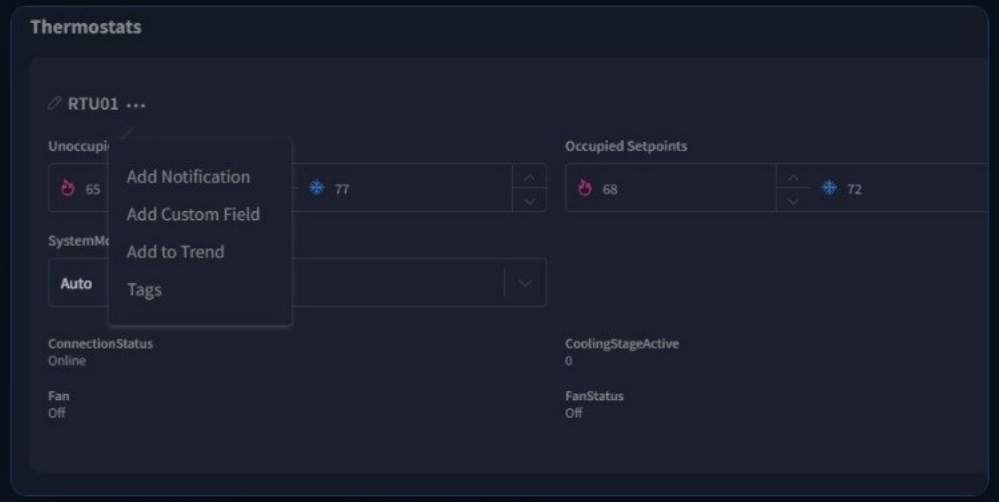

The Outlier Is Obvious

Zone, Space Temp, Fan, Fan Mode, Supply Temp, Occupied and Unoccupied setpoints, System Mode — for every unit, side by side.

- **Run your eye down Supply Temp**
  The unit that's running but not cooling stands out.
- **Standard compliance, visible**
  Setpoint pairs that don't match the standard are one glance away.
- **Blue arrow → Deep Control**
  Everything about one unit, one click.

Deep Control for one rooftop unit — adjustable settings on top, read-only status below.

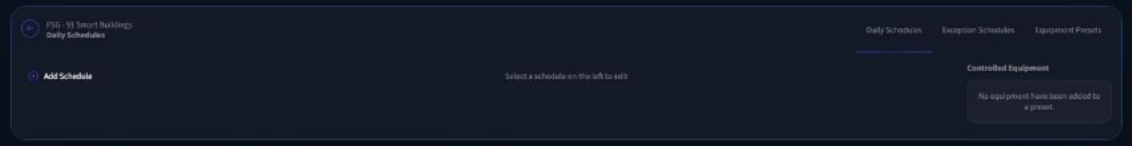

Equipment options: Add Notification · Add Custom Field · Add to Trend · Tags.

HOW · 05 · SETPOINTS & DEEP CONTROL

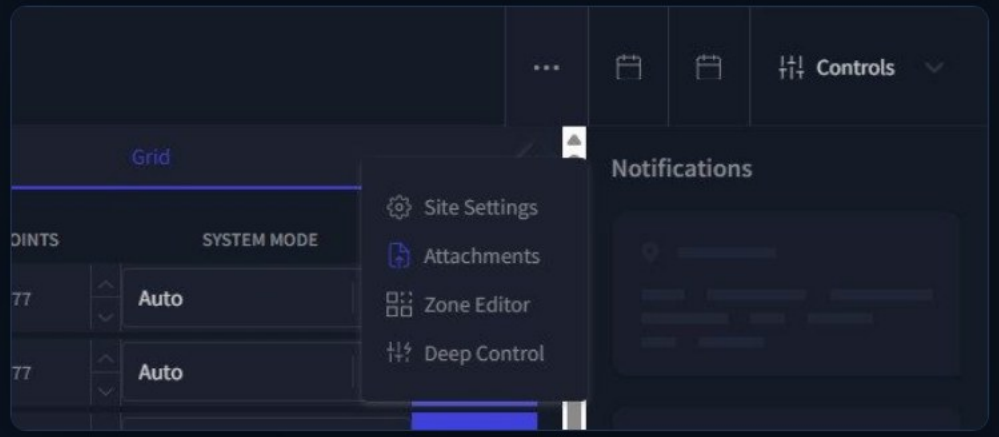

Change It From the Parking Lot

Use + / − on the card, the arrows in the Grid, or type a value. Changes are sent to the equipment right away. Deep Control is everything Chariot knows about one unit.

- **Occupied / Unoccupied pairs, Deadband, Fan Mode, System Mode**
  Your standard, enforced per unit.
- **Connection, stage active, effective occupancy, humidity**
  Status you'd otherwise send a tech to read.
- **Permissions decide who can change what**
  Store managers see; facilities adjusts.

Schedule tabs — Daily Schedules, Exception Schedules, Equipment Presets.

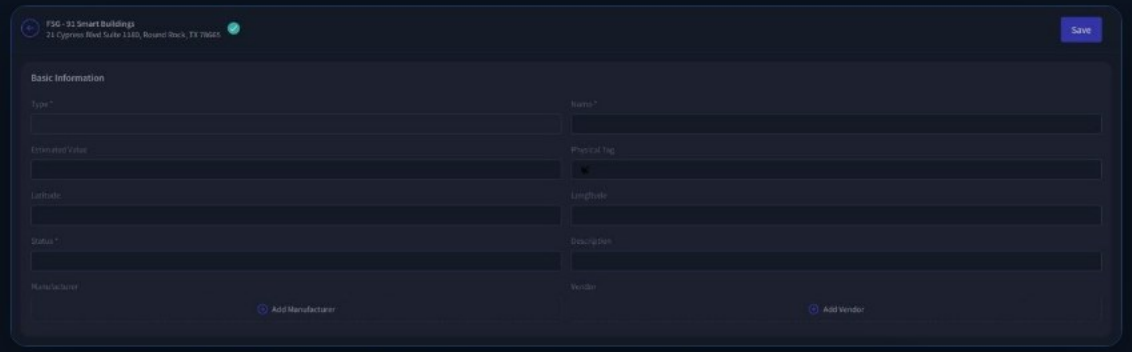

Site menu (…) — Site Settings, Attachments, Zone Editor, Deep Control.

HOW · 06 · SCHEDULES

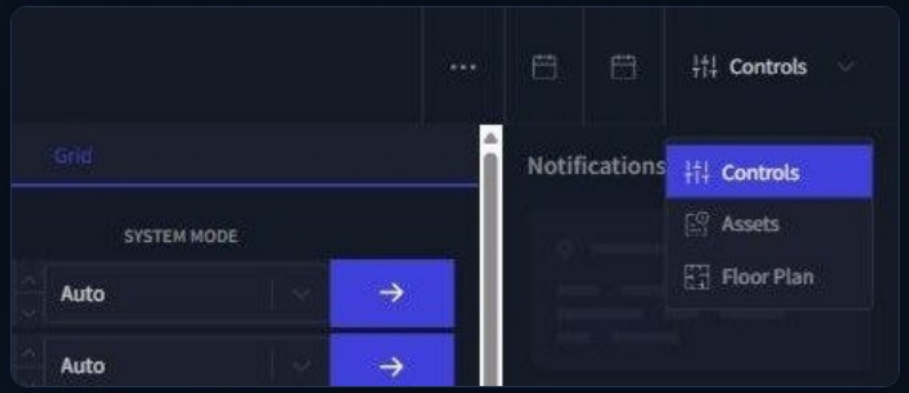

Closed Means Closed

Schedules decide when a site is occupied, and therefore which setpoints and lighting states apply. Exceptions override the daily schedule on holidays, early closures and events.

- **Daily Schedules**
  The weekly open and close times, per site.
- **Exception Schedules**
  Add the holiday ahead of time; no full occupied day while the doors are locked.
- **Equipment Presets**
  Your store standard in a button — setpoints and modes applied when a period starts.

Add Asset — Type, Name, Status, Estimated Value, Physical Tag, Lat/Long, Manufacturer, Vendor.

View selector — Controls · Assets · Floor Plan.

HOW · 07 · ASSETS & FLOOR PLAN

The Equipment Record, Where the Controls Are

Switch a site from Controls to Assets for an inventory with Dashboard and Table layouts, or to Floor Plan to see every controlled item placed on the building drawing.

- **Asset data beside live data**
  Manufacturer, vendor, value, tag — one record per unit.
- **Floor plan icons that act**
  Select a lighting zone to turn it on or off; a thermostat to see setpoints; a door for status.
- **Capital planning starts here**
  Report cards and repeat-failure history support repair-vs-replace.

Trends — three points from one rooftop unit over a week; overview strip at the bottom to zoom.

HOW · 08 · TRENDS

Evidence, Not Opinions

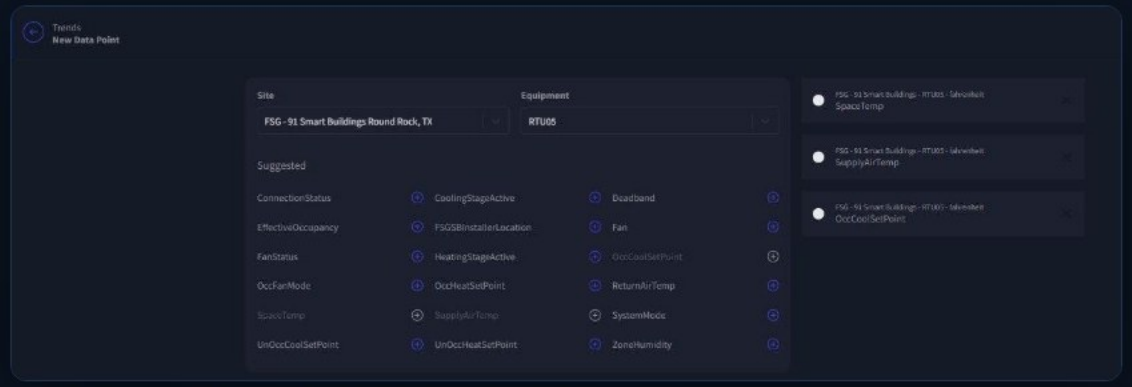

Line, bar, table, heat map or time chart on any stored point over any date range. Pick the timezone and the resolution, label weekdays, snapshot the chart.

- **Read the example**
  Setpoint flat at 72°F; supply air drops to the mid-50s when cooling; space holds near setpoint.
- **Space drifting up while supply stays warm**
  A unit that isn't cooling. Dispatch with a diagnosis.
- **Prove the repair worked**
  Before and after, on the same chart.

HOW · 09 · BUILDING A TREND

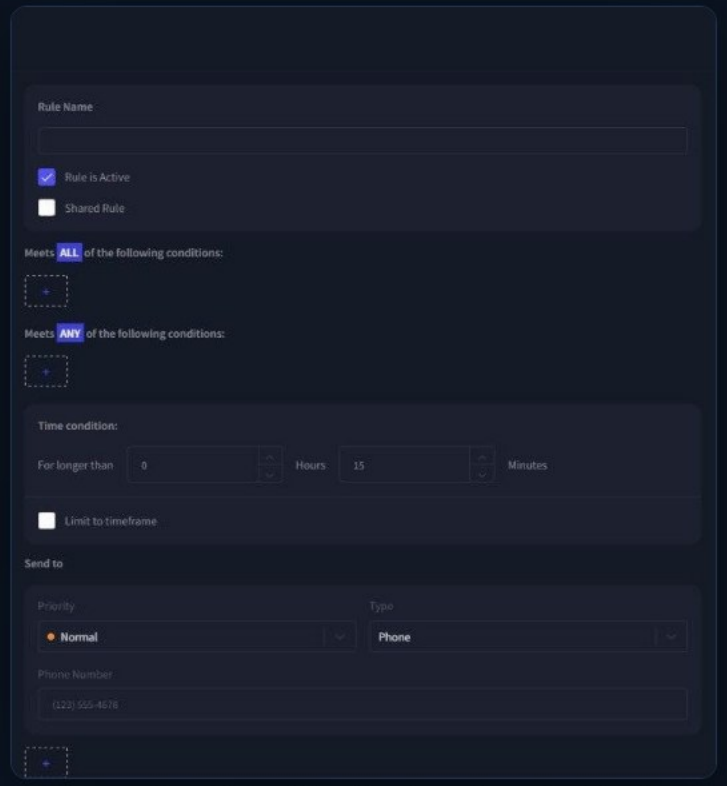

Four Clicks, Any Question

New Data Point → Site → Equipment → pick from Suggested: ConnectionStatus, CoolingStageActive, Deadband, EffectiveOccupancy, Fan, OccCoolSetPoint, SpaceTemp, SupplyAirTemp, SystemMode, ZoneHumidity and more.

New Data Point — choose Site, Equipment, then + the points you want from the Suggested list.

- **No report request, no wait**
  The facilities lead builds it at the desk.
- **Or start from the unit**
  "Add to Trend" from any unit's … menu in Deep Control.
- **1+ year of cloud data**
  Season over season, not just this week.

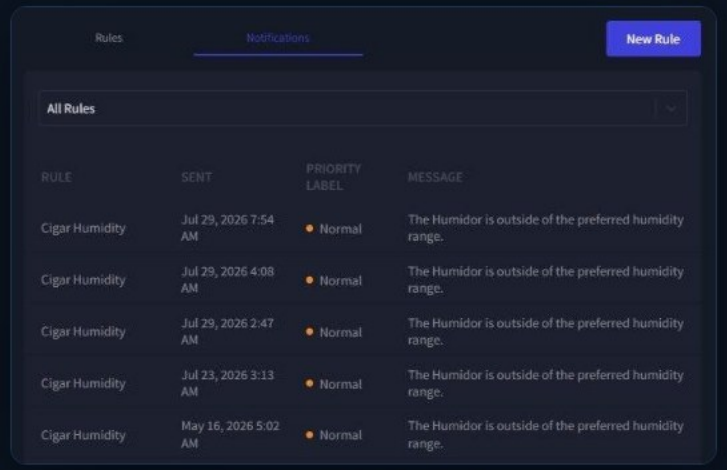

New Rule — name, Meets ALL / Meets ANY conditions, time condition, send-to priority and type.

HOW · 10 · RULES

The Text at 2:15 a.m.

A rule watches points and sends a notification when something is wrong. Conditions by Site, Site Label, Equipment Label or Point Label. A time condition filters out spikes. Priority Critical / High / Normal / Low. Phone or email, as many recipients as you need.

- **"Walk-in cooler above 41°F for 15 minutes"**
  The rule every store ops lead writes first.
- **More than / less than, equal, active, in or out of range**
  Against a value or against another point — space temp above its own cooling setpoint.
- **Shared rules, on/off switch, custom message**
  {{site_name}} in the text, so the alert says where.

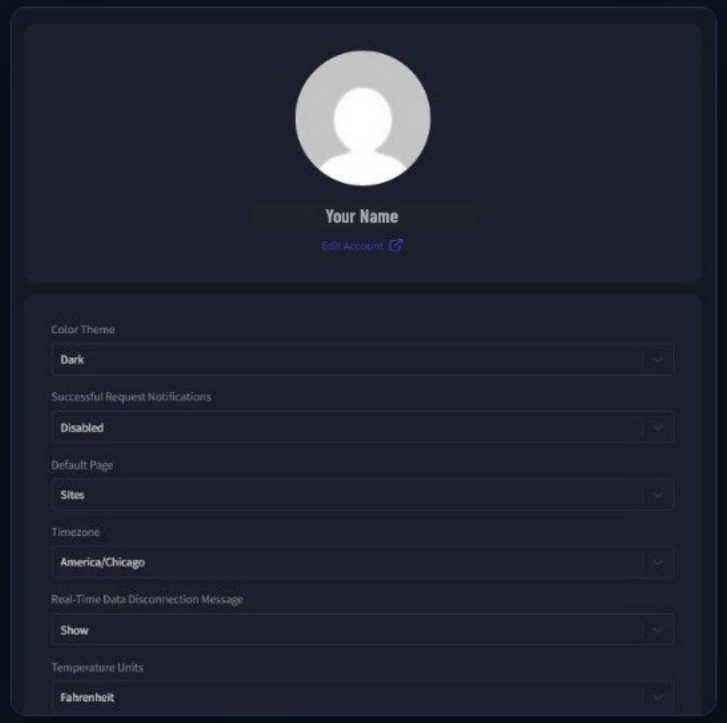

Notifications tab — every alert sent, newest first: rule, time, priority, message.

HOW · 11 · NOTIFICATION HISTORY

An Audit Trail You Didn't Have to Keep

Every alert ever sent, with the rule that fired it, when, its priority and the message. Filter to one rule. Recent alerts for a site also sit in the site's notification panel.

- **When the health inspector asks**
  The cold-holding history is already there.
- **Pattern spotting**
  The same humidor alarm at 2 a.m. every night is a repair, not a nuisance.
- **Nothing lost in a phone**
  Texts come and go. The log stays.

User Settings — theme, confirmations, default page, timezone, disconnection banner, °F/°C, edit account.

HOW · 12 · PEOPLE

Built for the People Who Run Stores

Written for facility managers, store and site operators, and anyone who checks conditions, adjusts comfort, reviews history and acts on alerts. No technical background needed.

- **One login per person**
  Administrators invite users; FSG sets what each can see or control.
- **Their defaults, their units**
  Dark or light, Fahrenheit or Celsius, which page opens first.
- **Live data, honestly labeled**
  A red bar says when real-time updates stop; select it to reconnect.

The Same Screen, Watched 24/7

SUPPORT CENTER

US-based, live controls experts

Equipment issues, access, schedules, rules and anything else in Chariot. Your support email, phone, address and administrator are set at program start.

ALARM TRIAGE

We clear the noise

FSG receives, qualifies and clears alarms on your behalf. You see what matters.

REMOTE FIRST

Fixed before a truck rolls

An offline site? Support checks the controller connection remotely. A setting that reverted? A schedule or preset is overriding it — we find it.

THEN THE FIELD

Dispatch when it has to roll

FSG crews or your preferred vendor, to contracted SLAs. Warranty managed so you never pay for covered items.

NOW

Start With the Site List

Send 5–20 candidate sites. FSG scopes the survey, assigns a tier per site, and comes back with a firm price and a 90-day measurement plan.
