FSG ENERGY PERFORMANCE · ENERGY MANAGEMENT

Every Site, One Screen

HVAC, lighting and refrigeration — seen, controlled and kept running across your whole portfolio.

BOBBY GRAHAM · CGO, FSG

WHY

The Problem Is Silent

A cooler drifts past 41°F overnight. A thermostat walks from 74 to 68. A closed store runs a full occupied day. Nobody sees it until the bill or the spoilage.

ZERO VISIBILITY IS THE MOST EXPENSIVE LINE ITEM NOBODY BUDGETS FOR

WHY NOW

What's Moving in Your Portfolio

Energy, refrigeration and comfort are on the line every time the portfolio changes. Controls get specified once and travel with every site that follows.

- **New prototypes, rebrands, remodels**
  The store standard gets written now. Put the controls in it.
- **Foodservice and refrigeration growth**
  More load per site, more alarms worth catching, more to lose.
- **Rates, demand charges, ESG reporting**
  The peak sets the bill. Someone has to report the kWh.
- **Orphaned controls, thinner maintenance budgets**
  Fewer truck rolls, not more technicians.

WHAT

One Platform Underneath

SOFTWARE

Chariot

FSG's own platform. Every site, every system, one browser window. Nothing to install.

HARDWARE

Clarity panels, built in-house

UL-listed Niagara 4 controllers, thermostats, sensors and metering from FSG's UL 508A shop.

CREWS

FSG installs and services it

20,000+ FSG Certified Technicians. Self-performed, coast-to-coast. We service what we install.

SUPPORT

24/7 US-based support center

Live controls experts who clear the alarms and avoid the truck rolls. That's where the savings stick.

HOW · 01

See Everything

Chariot was written for store and facilities teams, not engineers. Sites on a map, live conditions, trends and alerts — on a phone or a desk.

- **Every site, online status at a glance**
  Green check means connected and reporting.
- **Every RTU in one table**
  Space temp, supply temp, setpoints, mode. The outlier is obvious.
- **Trends that settle arguments**
  A unit that's "running" but not cooling shows up in one chart.
- **Rules that text the manager**
  "Walk-in cooler above 41°F for 15 minutes" — before product is lost.

HOW · 02

Control the Three That Matter

HVAC

One site standard, enforced

Remote setpoints and schedules. Drift protection keeps 68/74 from walking one thermostat at a time.

LIGHTING

Canopy, lot and store on one clock

Astronomical scheduling, dimming and daylight harvesting. BrightBox controls up to 48 circuits per panel.

REFRIGERATION

Alarms before spoilage

Demand-based defrost, temperature and offline alarms, and an audit-ready food-safety history.

AND THE REST

Fuel, car wash, kitchen, EV, solar

Critical asset monitoring, kitchen scheduling, demand-charge management, EV managed charging, solar O&M on the same platform.

HOW · 03

Keep the Savings

Most platforms watch. FSG fixes. The support center is the difference between an install and a program.

- **Alarm triage, on your behalf**
  FSG receives, qualifies and clears the noise. You see what matters.
- **Remote fixes before a truck rolls**
  Live controls experts de-escalate most issues from the center.
- **Weekly portfolio health report**
  Offline sites, setpoint compliance, lighting waste, equipment health.
- **Contracted SLAs, flat per-site fee**
  P1/P2/P3 response times. Warranty managed so you never pay for covered items.

PROVEN AT SCALE

This Already Runs

30,000+

EMS locations integrated

One program alone: 7,000 sites deployed, 6,500 on Complete Support.

735,955

Alarms cleared in one year

Triage turns noise into a short list your team can act on.

3,523

Truck rolls avoided

Fixed from the support center instead of the parking lot.

1,975

Sites audited in five days

Enterprise-scale BAS audit and proposal program. 200,000,000+ kWh saved for customers.

BUDGETARY · PER SITE

Pricing Follows Complexity

CORE · ~3-YR ROI

~$10K – $20K per site

Smart thermostats on HVAC plus on/off lighting via contactors. Every site can start here.

STANDARD · ~5-YR ROI

~$20K – $40K per site

Core plus refrigeration control and limited integration. Where most multi-site operators land.

ADVANCED · ~5-YR ROI

~$50K – $100K+ per site

Full BAS: RTUs, refrigeration, appliances, solar inverters, EV chargers on a Clarity Pro panel.

RECURRING

~$30 / site / month, each

Chariot platform and Complete Support, flat per site. Rebates filed by FSG. Firm pricing follows the site survey.

THE PLAN

A Pilot That Proves It

5–20 sites across formats and climates. Measured against a real baseline so the rollout decision is a number, not a feeling.

- **1 · Survey**
  FSG engineers walk the sites and set a tier per site. Included.
- **2 · Firm price**
  Per-site proposal. Rebates identified and filed.
- **3 · Install and commission**
  FSG crews. Chariot portal and training for your team.
- **4 · Measure, then decide**
  90 days of trends, alarms and energy vs. baseline. Health reports at 30, 60, 90.

NOW

Start With the Site List

Send 5–20 candidate sites. FSG scopes the survey and brings a live Chariot demo to your team — on us.
